Any information about printing on glass or ceramics is welcome. Please send info to e-mailadress.

Thanks a lot !

This question is both complex and very long to anbswer to!

You can find many indications in my CD - see But if you don't have the smallest knowledge about it and need to learn the technology from A to Z, it can be very long and complicate and you need a consultant for it !

Without mentionning that due to the impact of the REACH regulation in the coming years, the technology will have to change drastically !

MC
